Professional Summary

Cloud and cybersecurity engineer with hands-on experience securing production Azure environments and managing cloud infrastructure across staging and development environments. Experienced supporting developers and QA engineers through application development, testing, and deployment while managing identity and access controls and automating infrastructure operations. M.S. in Cybersecurity – Information Systems/Technology and CompTIA Security+ certified.

Experience

Technical Operations Cloud Engineer June 2025 – April 2026
FinLocker *St. Louis, MO*

- Co-owned Azure security and reliability across production, staging, and development environments
- Administered AKS clusters, node pools, upgrades, containers, CronJobs, VMs, and jumpboxes
- Secured ingress/egress, WAF policies, Key Vault, secrets, keys, and customer-facing TLS certificates
- Enabled developers and QA through access, log analysis, data validation, testing, and deployment support
- Owned onboarding/offboarding, Entra ID access, MDM, and Intune policies for employees and contractors
- Led response to phishing and compromised accounts or devices through containment and remediation
- Engineered Terraform IaC and Azure Logic Apps automation for repeatable deployments and operations.
- Drove vulnerability remediation through patching, Microsoft/CISA advisories, and audit findings.
- Migrated 50+ Azure VMs to Azure Monitor Agent and DCRs, restoring reliable Log Analytics ingestion.

AI & Cybersecurity Researcher Jan 2026 – April 2026
Kennesaw State University *Kennesaw, GA*

- Built VMware and VirtualBox labs to test network behavior, security tools, dependencies, and execution paths
- Developed RAG workflows from cybersecurity research and documentation for context-aware security guidance
- Deployed blue/red-team agents at CCDC, supporting 15 universities during live competition environments

AI & Cybersecurity Researcher May 2025 – Dec 2025
University of Missouri - St. Louis *St. Louis, MO*

- Co-owned design and development of a Python cybersecurity AI platform using LLMs, RAG, and security tools
- Integrated Nmap, Metasploit, Hydra, and Linux tools into controlled AI-assisted security workflows
- Engineered command validation, staged execution, output review, and guardrails to block destructive actions
- Presented architecture and live demos to Booz Allen Hamilton and U.S. Department of Defense stakeholders

Technical Skills

Cloud Services: Microsoft Azure, Amazon Web Services (AWS)
Infrastructure: Kubernetes, Docker, Terraform, Bicep, Azure DevOps, GitHub, Linux
Networking: SSL/TLS, DNS, Barracuda WAF, Azure Firewalls, VNets
Programming and Scripting: PowerShell, Python, JavaScript, SQL (MySQL), Bash

Certificates

CompTIA Security+
AWS Cloud Practitioner

Education

University of Missouri - St. Louis St. Louis, MO
Master of Science in Cybersecurity - Information Systems / Technology *Aug. 2023 – May 2025*

University of Missouri Columbia, MO
Bachelor of Science in Chemistry *Aug. 2013 – Dec 2018*
